## Senior Analyst / Manager – Data Science

*(Full Time · Multiple Positions)*

📍 Australia (Remote/Hybrid) – SA, ACT, NSW, VIC, QLD, TAS, WA and NT

---

### About the Role

We are seeking to hire multiple Senior Analyst and Manager roles to join our growing data analytics practice. The roles offer the opportunity to work closely with senior stakeholders across industry and government, delivering high-impact analytics solutions that support policy and commercial decision-making.

You will play a key role across both client delivery and business growth, with the opportunity to shape how we build and scale our capabilities.

---

### About Us

We are a start-up specialist data analytics and modelling consultancy, helping organisations make better decisions through robust, transparent, and actionable insights. Our work spans predictive analytics, financial modelling, and data-driven decision support across both industry and government.

We combine deep technical expertise with strong commercial understanding, enabling us to tackle complex problems and deliver solutions that are not only technically sound, but also practical and decision-ready. Our approach is highly collaborative—we work closely with clients, often embedding within their teams, to ensure outcomes are aligned, sustainable, and fit for purpose.

---

### Key Responsibilities

- Deliver high-quality analytics solutions across a range of projects
- Apply machine learning, predictive modelling, and quantitative techniques to solve complex public policy or business problems
- Contribute to the preparation of business proposals, including background research, structuring approaches, and drafting content tailored to client needs
- Support the continuous improvement of internal delivery processes, templates, and methodologies to enhance efficiency, quality, and consistency

### Project and Team Leadership (Manager Level)

- Manage end-to-end project delivery to ensure projects are delivered on time and on budget

- Coach and mentor junior team members, providing technical guidance and oversight
  - Support quality assurance and review of deliverables
- 

## About You

### Essential Requirements

- A strong quantitative background (e.g. actuarial science, data science, mathematics, statistics, physics, computer science or similar)
- **Senior Analyst:** 3+ years' experience
- **Manager:** 5+ years' experience
- Australian citizenship to obtain security clearance
- Proficiency in Python, SQL and/or SAS (experience with additional programming languages is highly regarded)
- Strong work ethic, proactive and a team player
- Willing to work on-site at client locations as required

### Desirable Experience

- Strong capability in machine learning and predictive modelling
  - Consulting or client-facing experience
  - Financial modelling experience or strong Excel skills
- 

## Why Join Us

- Competitive remuneration (salary + super + bonus)
  - Flexible, remote working arrangements across Australia
  - Accelerated career progression based on performance and team contribution not tenure
  - Work directly with senior stakeholders on high-impact, real-world problems
  - Be part of a values-driven, flat-structured team where your opinions are valued
  - Opportunity to take ownership and shape both client outcomes and internal capability
  - A collaborative, high-trust environment with strong focus on quality and professional growth
- 

## How to Apply

If you're interested, we'd love to hear from you. Please send your CV and a short note to [danwei@modax.com.au](mailto:danwei@modax.com.au) outlining your experience and interest in the role.
